

## **HOW TO KEEP A CEMENT MIXER DRUM CLEAN**

**ALWAYS START MIXER BEFORE  
LOADING DRUM** & keep mixer running all  
the time material is in the drum.

### **IMMEDIATELY AFTER EMPTYING**

Trickle a small amount of water into the  
drum and keep mixer running for a few  
minutes. **This will rinse drum clean  
before any material sets.** Cleaning can  
be enhanced by adding sharp sand /  
ballast to the water.

### **NEVER USE BRICKS OR LUMPS OF CONCRETE**

They have no cleaning effect but merely  
damage the drum.
